

USGS SURFACE-WATER GAGING STATIONS AND MAJOR DRAINAGE BASINS IN MASSACHUSETTS AND RHODE ISLAND - WATER YEAR 2005

Description of Downstream Order Numbering System

The station-identification number is assigned according to downstream order. The number usually consists of eight digits, but may contain more if additional detail is needed in heavily populated stream basins and subbasins. The first two digits (01) indicate the Part number used to describe rivers that flow into North Atlantic Slope Basins (formerly used in Water-Supply Papers to designate major river systems). These first two digits are omitted on the map but appear in the chart below. The last six or more digits indicate the downstream order within the Part. Gages are left in the series of numbers to allow for new stations that may be established; hence, the numbers are not consecutive.
